SENTINEL

# Audits by top-3 auditors has resulted in **1Billion losses**

Audit firm	Number of audited projects	min price per audit	Total amount lost
Certik	4 460+	\$25k	<b>\$913M</b>
Hacken	800+	\$20k	<b>\$12.2M</b>
PeckShield	350+	\$15k	<b>\$156M</b>

## **Weak points** of smart contract audits

- Risk of calculation errors
- Sole reliance on audits
- Oversight in update tracking
- Vulnerability to oracles manipulation
- Time-intensive process
- High costs

# Sentinel - shielding your smart contract, including:

Networking monitoring & countermeasures

Individual risk identification

No need for sensitive data permissions

Subscription model

Codeless integration

No chance of wiping out

[PRE-SIGN UP](#)

# How Sentinel works

The client sets **Trigger** and **Action** parameters

**Client**

**Trigger**

— **Tx patterns**

- ▲ Tx types
- ▲ Smart contract address
- ▲ Custom parameters

— **State patterns**

**Action**

**Smart contract pause** —

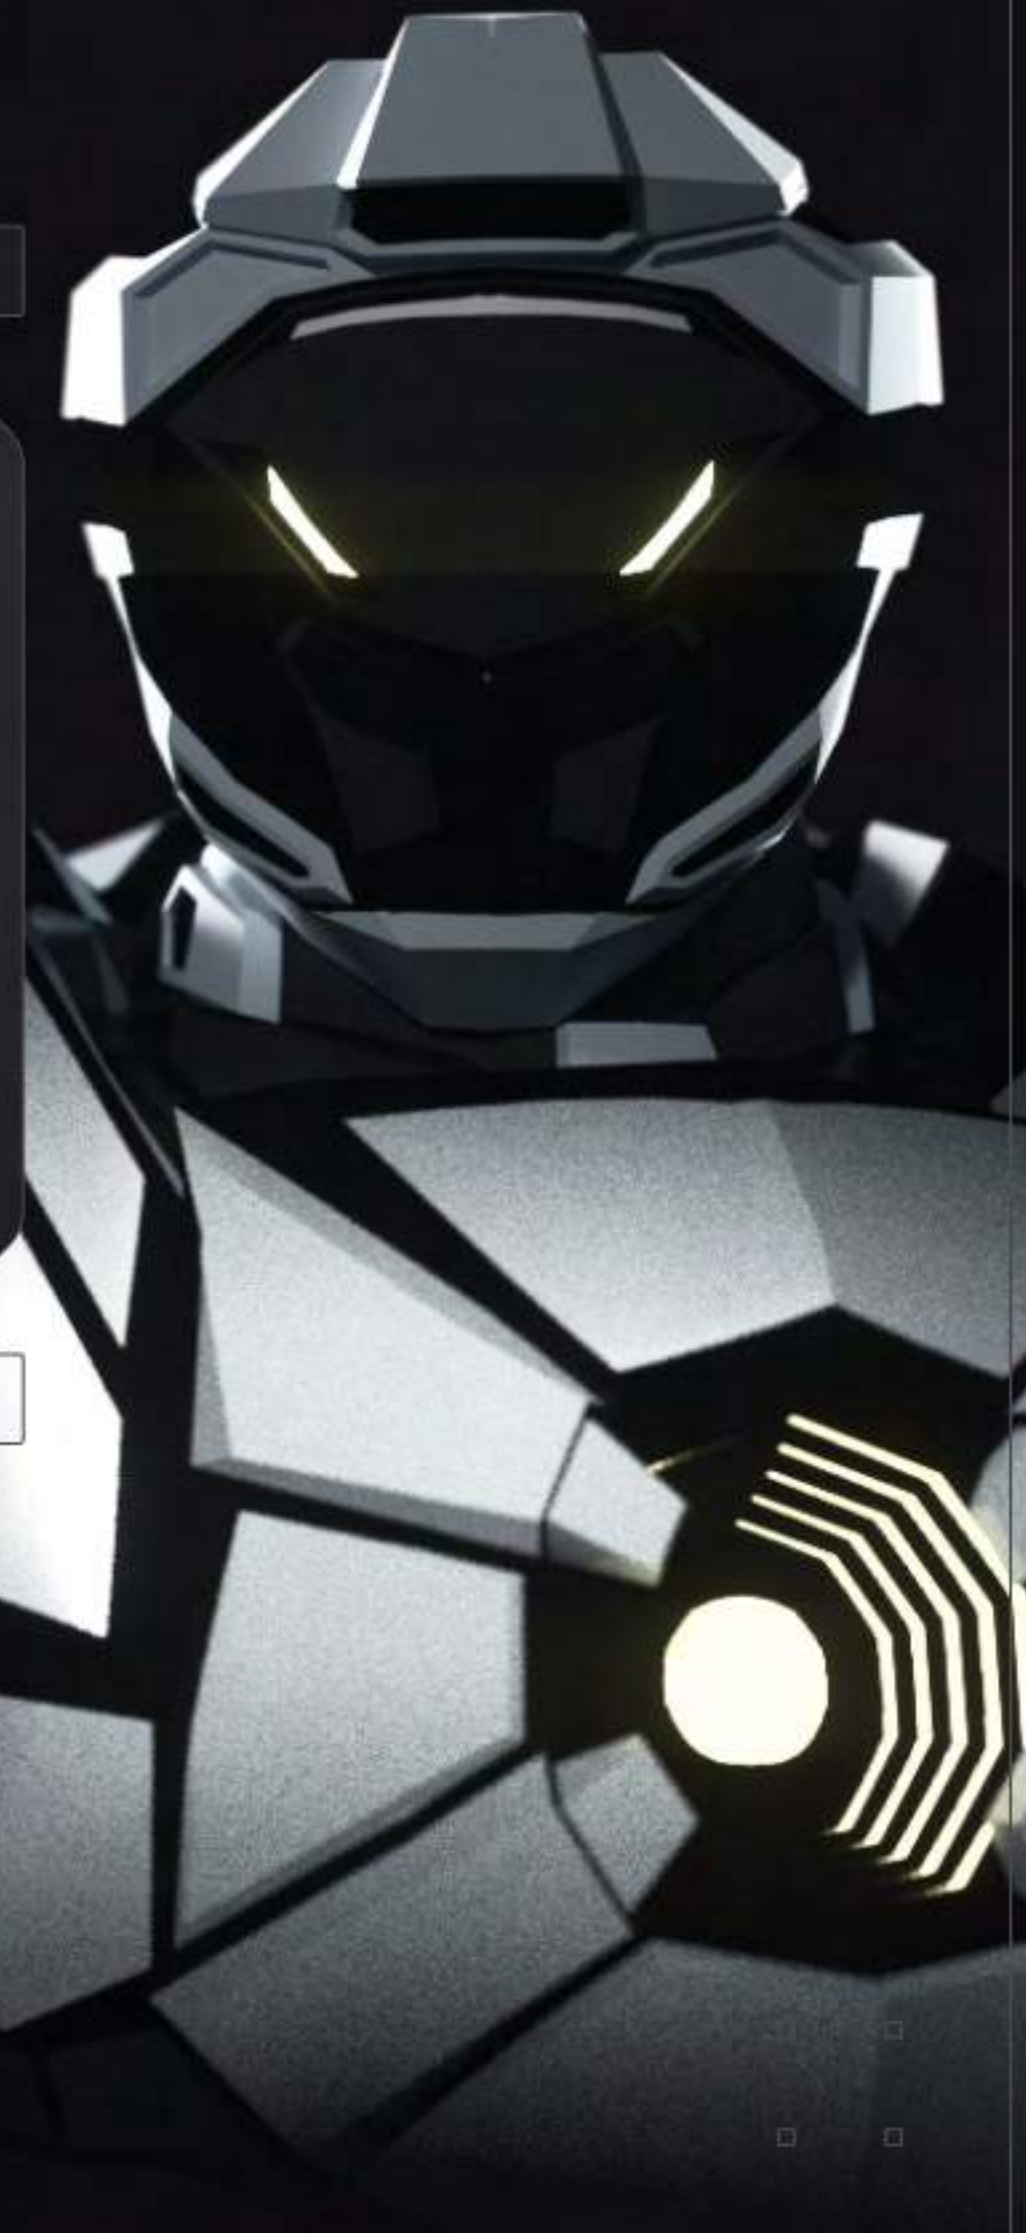

**Liquidity withdrawal** —

**Custom action** —

WALLET RESCUE

If a hacker stole your crypto but is still unaware of your **staking** or **vesting**...

...there is a way to protect your remaining crypto funds!

[VIEW DETAILS](#)

# Wallet Rescue

The screenshot displays the Wallet Rescue interface. At the top, it shows the network set to BSC with gas settings for Private (60 Gwei) and Market (5 Gwei). A 'SIMULATE' button is visible in the top right. The main area is divided into two panels. The left panel, titled 'Bundle chain: BSC', contains a list of transactions. One transaction, 'Ethereum Transfer #1', is highlighted with a yellow border and contains the following details: Initiator: 0x95C3C7...95E15F, Token Address: 0x172F7...D8D0B1, and Value: 0.001. Below this list is a yellow '+ ADD TRANSACTION' button. The right panel, titled 'Ethereum Transfer #1', is for editing transaction data. It includes a 'SIGN' button and a close 'X' button. The 'Sender Address' field is populated with the address 0x95C3C7779dF99E700722a2Dd29AC70723895E15F.

- Transaction bundles and private mining
- Managed by user through our API
- Support BSC and ETH blockchains
- Pay for successful case only
- Referral options available

**We impose a 6% fee on safeguarded funds**

# WHITE-HAT HACKING

# Hackless is developing a global system for mempool monitoring

This system can monitor any smart contract chosen by Hackless without requiring integration.

## That's how it works:

Zero reputation risk for a hacked project

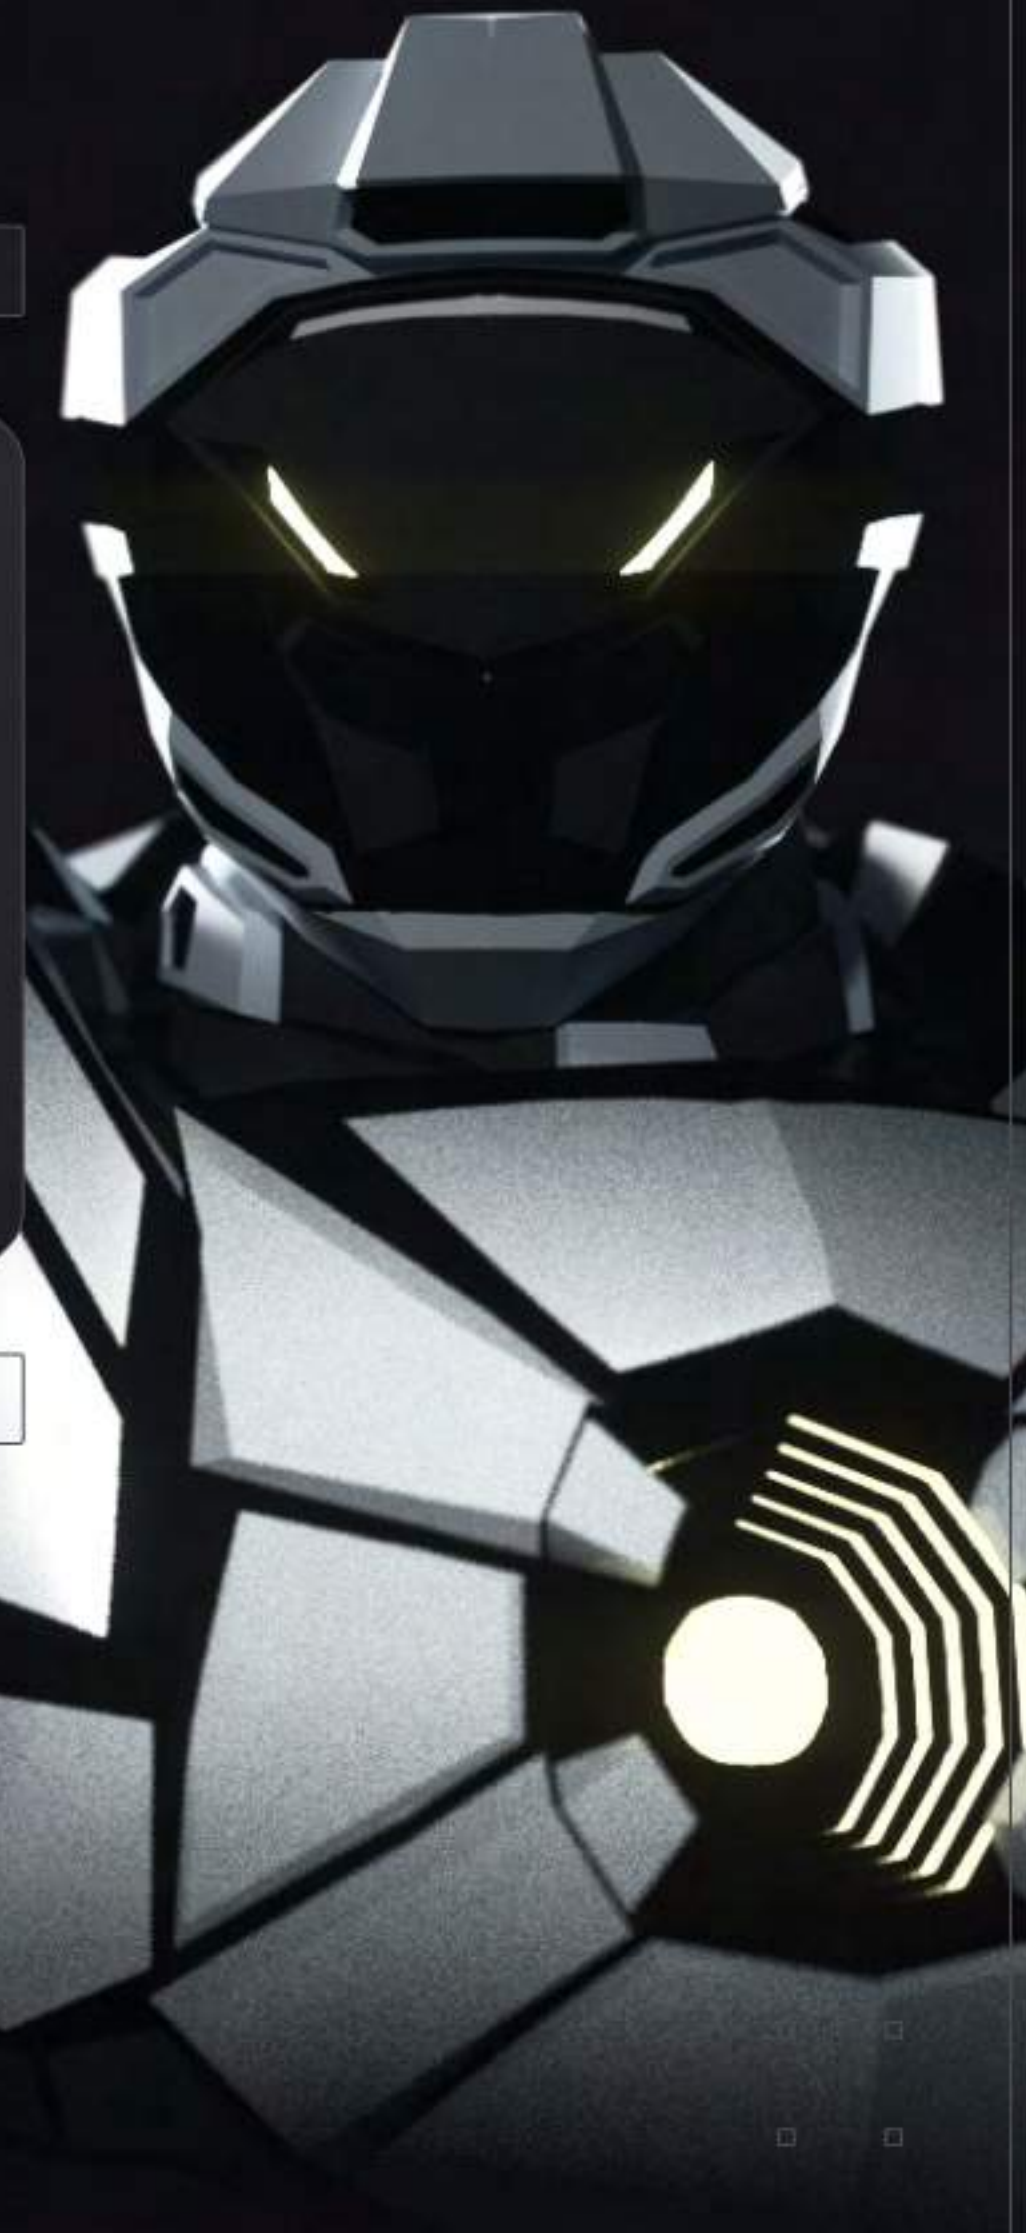

All Hackless' wallets are white-labeled

Partner with AML provider **Crystal** 

Partner with top validators

HKLS TOKEN

# Tokenomics

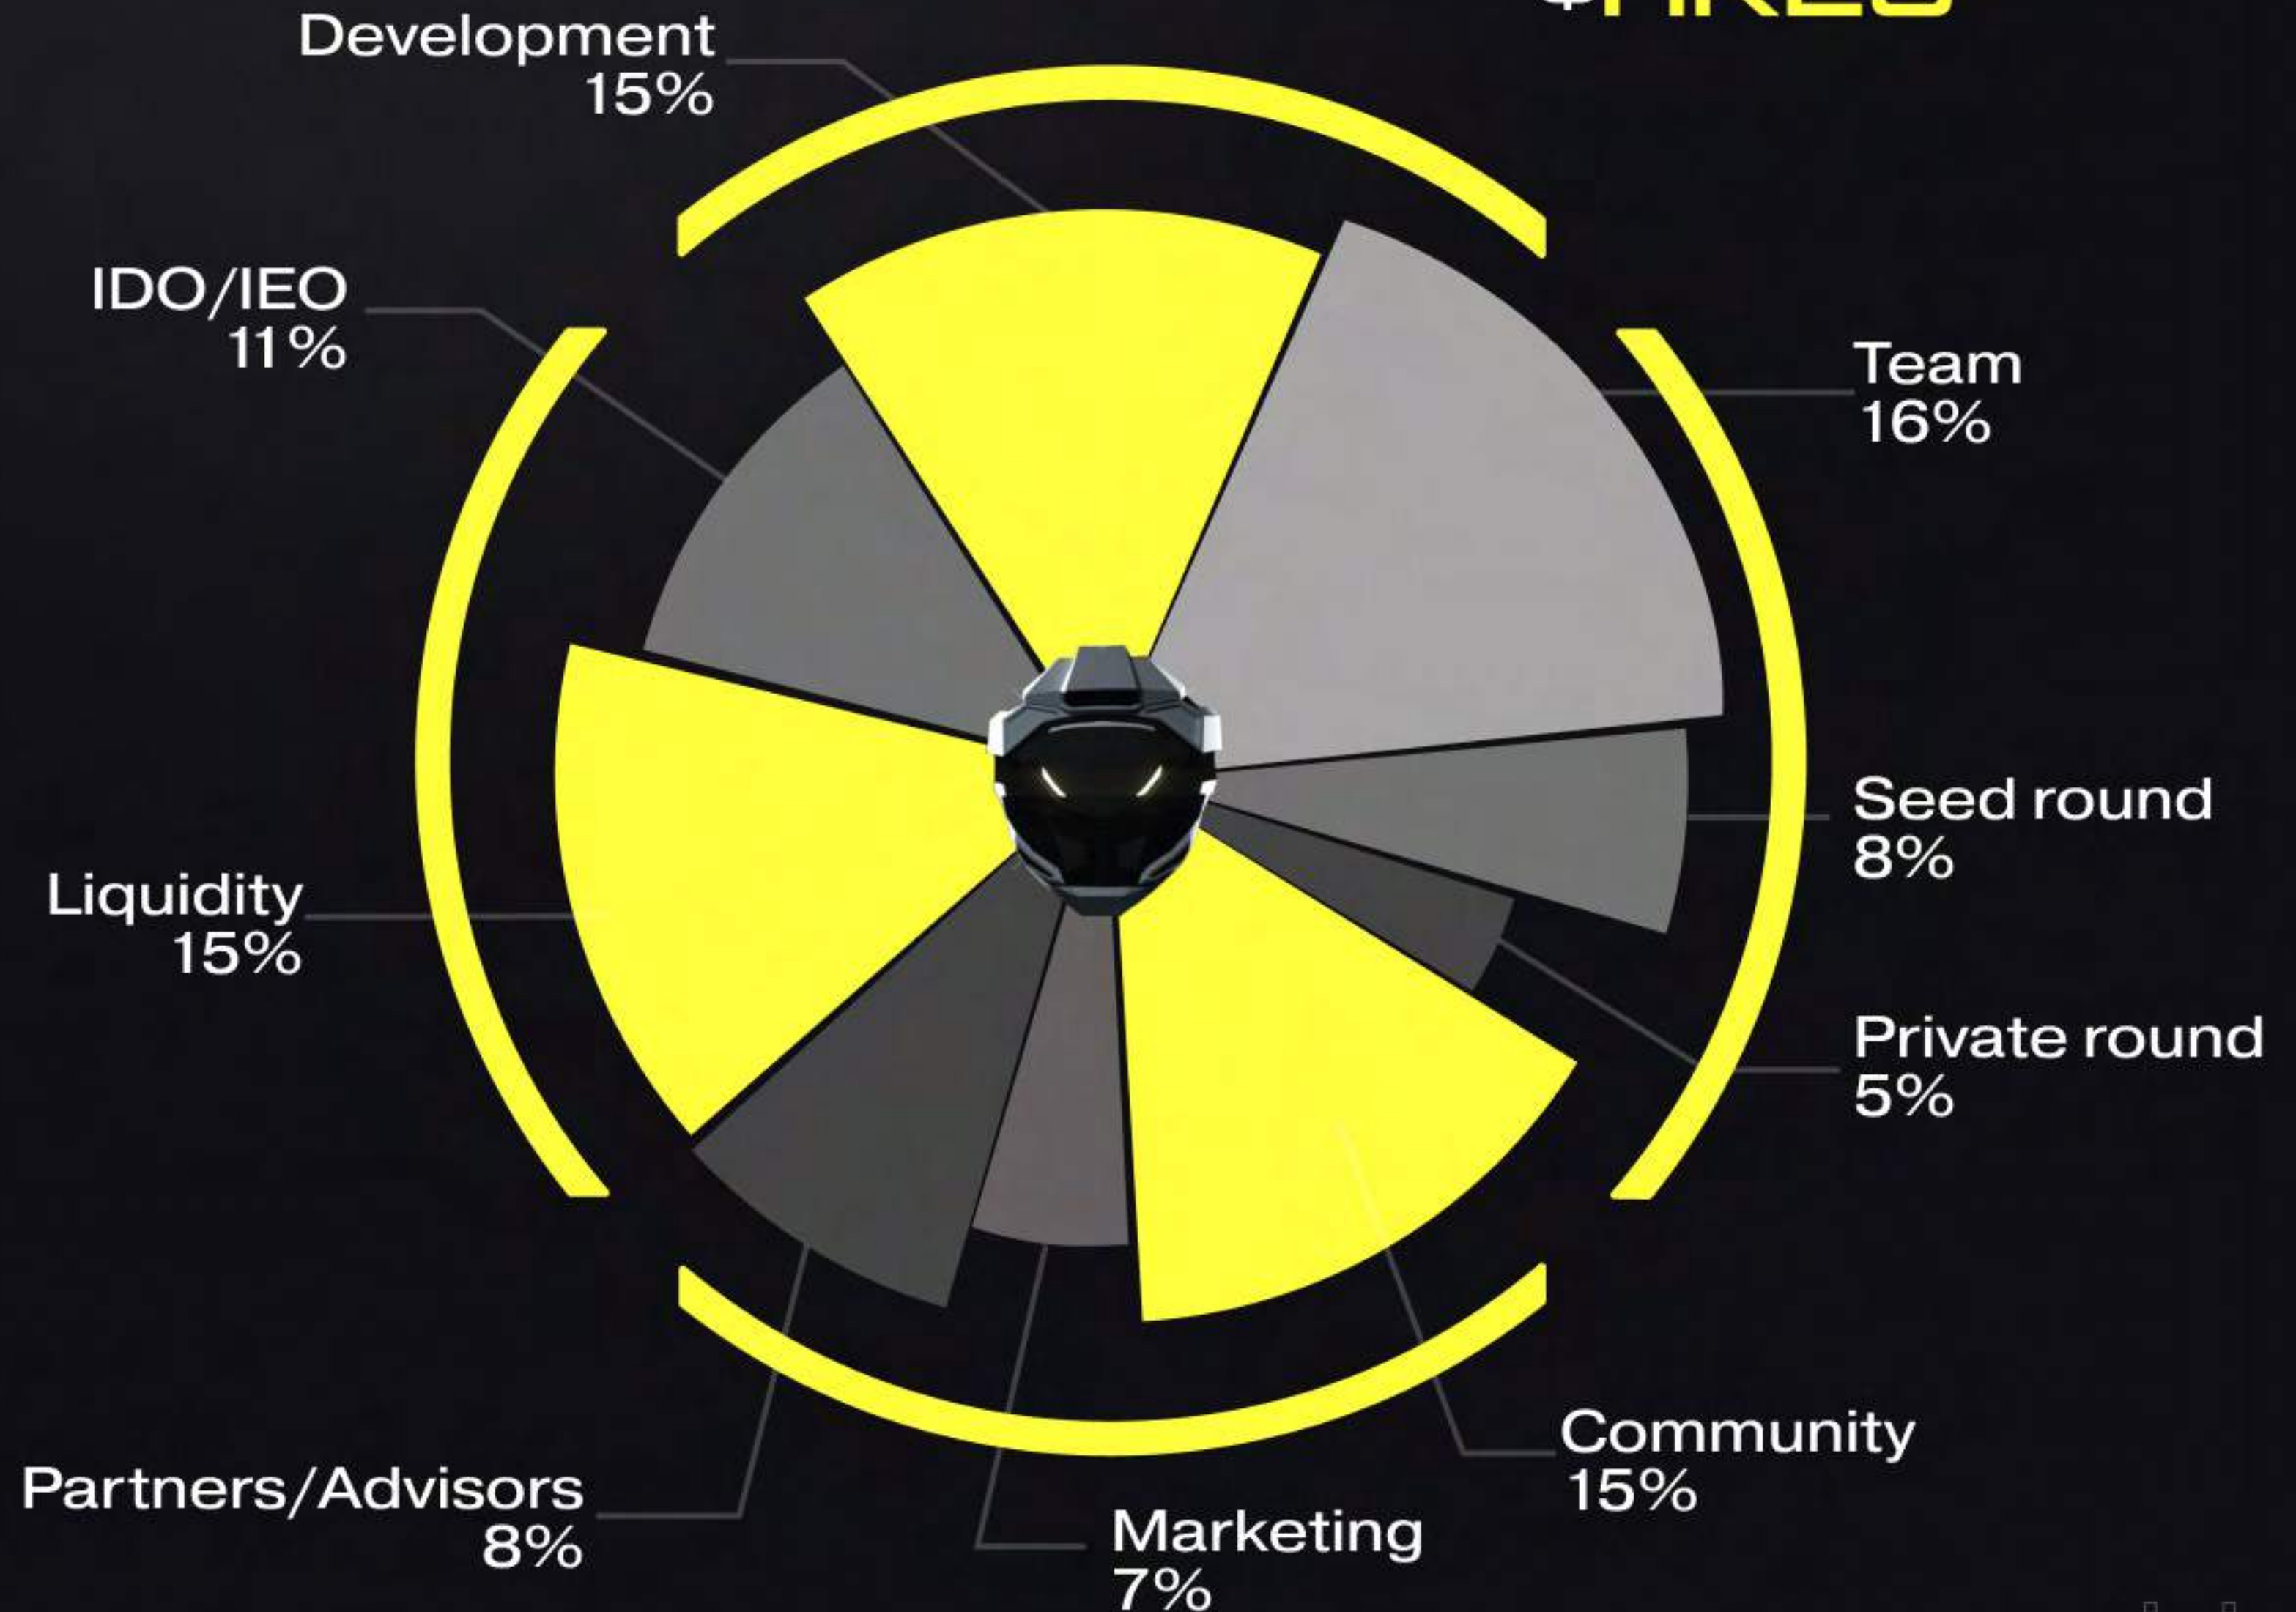

Hackless operates its own utility token - **HKLS**.

This token is used as an **internal asset** to gain access to the platform's core features.

The utility of the token extends to **subscription** perks, **discounts** for token holders, and its use as the primary **payment method** within the platform.

**The IDO will be coming soon.** Token distribution mirrors the pie chart:

**\$HKLS**

# HACKLESS RAISED \$1.2M

Our investors aren't just funders; they're partners in our vision to elevate blockchain and DeFi security. Each brings unique insights, experiences, and a shared commitment to innovation.
